Presentation of PLM

Purposes

- Application to learn programming.

Presentation of PLM

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...

Presentation of PLM

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...
- ... while the teacher helps the ones having trouble.

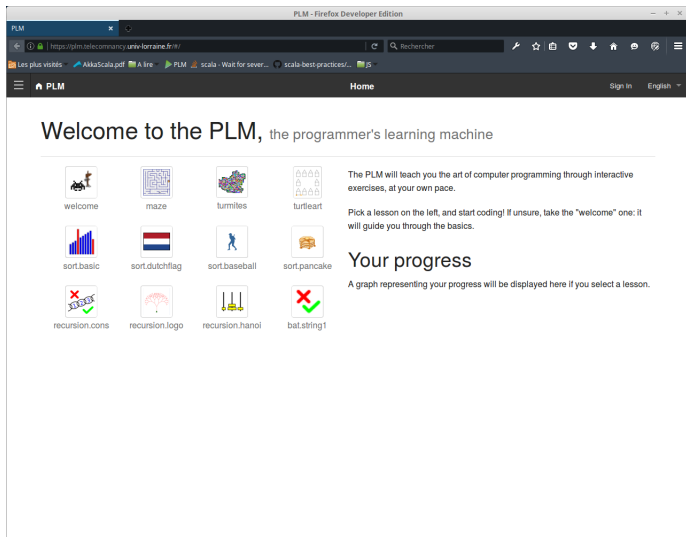

Presentation of PLM

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...
- ... while the teacher helps the ones having trouble.
- Used at TELECOM Nancy since 2008.

Presentation of PLM

Quick demo

Presentation of PLM

12 lessons, 200 exercises

PLM - Mozilla Firefox

https://plm.univ-lorraine.fr/la/lessons/maze/maze-wallfollower/wallfollowerMaze

Les plus visités Linux Mint Community Forums Blog News NinjaMock - free tool... Spotify Web Player Wau The Most Amaz... Coursa P2P

PLM Maze / WallFollowerMaze Se connecter Java Français

World Objective

Éditeur de code: Réinitialiser API

```
public void run() {  
    // ...  
}
```

Résultats de l'exécution

Cas de tests: Another labyrinth Labyrinth

Presentation of PLM

PLM Recursion.logo / Tree Se connecter Java Français

World Objective

Résultats de l'exécution

Éditeur de code: Réinitialiser API

```
public void tree(int steps, double length, double angle, double shrink) {  
    // ...  
}
```

Cas de tests:

tree(10,100,90,0.68)	▶	tree(10,80,45,0.7)	▶
tree(7,75,15,0.8)	▶	tree(7,75,30,0.8)	▶

Presentation of PLM

Supported languages

- English
- French
- Brazilian Portuguese

Presentation of PLM

Supported programming languages

Presentation of PLM

Evolution of the project

- Formerly a fat client
 - Written in Java

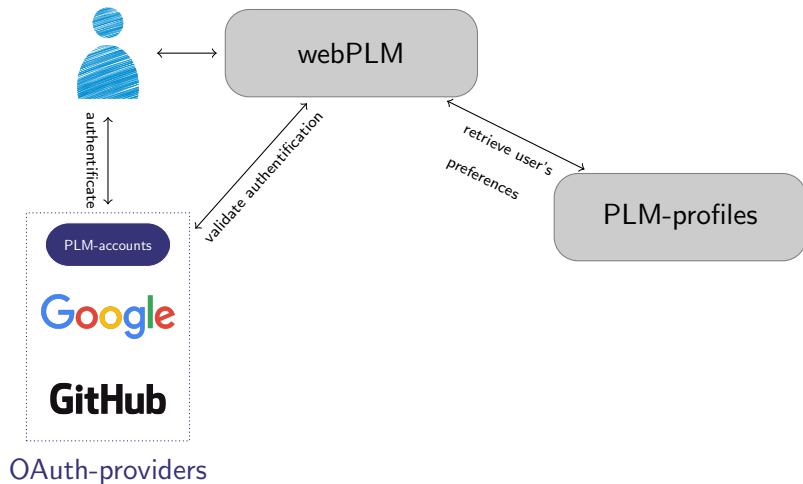

Presentation of PLM

Evolution of the project

- Formerly a fat client
 - Written in Java
- Switch to a web application
 - Server implemented in Scala using PlayFramework
 - User interface written in Javascript using AngularJS and Foundation

Presentation of PLM

Application's architecture

1 Presentation of PLM

- Purposes
- Demo
- About PLM
- Architecture

2 User's code's assessment

- Challenges
- Extraction of the execution component
- Docker

3 Result

4 Next steps

User's code's assessment

Execution components

User's code's assessment

Limits

- Run on the same machine, same JVM

User's code's assessment

Limits

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops

User's code's assessment

Limits

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Storage jamming with files

User's code's assessment

Limits

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Storage jamming with files
- And from *System.exit(whatever)*?

User's code's assessment

Limits

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Storage jamming with files
- And from *System.exit(whatever)*?
- Scalability issues

User's code's assessment

Chosen solution

- Delegate the execution to workers

User's code's assessment

Chosen solution

- Delegate the execution to workers
- *Let it crash* strategy

User's code's assessment

Chosen solution

- Delegate the execution to workers
- *Let it crash* strategy
- Pros:
 - Allow to run code without impacting webPLM's performances
 - Meet the scalability requirements

User's code's assessment

Chosen solution

- Delegate the execution to workers
- *Let it crash* strategy
- Pros:
 - Allow to run code without impacting webPLM's performances
 - Meet the scalability requirements
- Cons:
 - Need to deploy them easily
 - Should be able to reset them
 - Have to restrict their resources usage

User's code's assessment

Architecture with judges

User's code's assessment

Docker

User's code's assessment

Example of Dockerfile

User's code's assessment

Docker-compose

1 Presentation of PLM

- Purposes

Result

Current architecture

Result

Live-session in TELECOM Nancy

- 30 hours of live testing with 100 students.

Result

Live-session in TELECOM Nancy

- 30 hours of live testing with 100 students.
- Engine is (almost) working fine...

Result

Live-session in TELECOM Nancy

- 30 hours of live testing with 100 students.
- Engine is (almost) working fine...
- ... but user experience needs to be improved!

Result

Live-session in TELECOM Nancy

- Can't cope with the workload.

Result

Live-session in TELECOM Nancy

- Can't cope with the workload.
- No tools for monitoring set up...

Result

Live-session in TELECOM Nancy

- Can't cope with the workload.
- No tools for monitoring set up...
- ... so the bottleneck is unknown.

- Docker

3 Result

4 Next steps

Next steps

Refactor the code

- Rushed to release a stable version before September...
- Needed to refactor some parts of the code.
- Standardized behavior of local and server mode.

Next steps

Simplify workflow to adapt the content

- Store most content inside PLM.
- Heavy and error prone workflow.
- Need to extract the content from PLM's jar.
- Allow to implement an exercise editor.

Next steps

Solve performance issues

- Set up some monitoring tools.
- Perform some load testing to identify the bottleneck.

Thanks for your attention, any questions?
