

ADT PLM

Programmer's Learning Machine

Matthieu Nicolas

IJD Seminar, 2016-02-02

1 Presentation of PLM

- Purposes
- Demo
- About PLM
- Architecture

2 To a web app

- Goals
- Server-side
- Client-side

3 Assessment of user's code

- Challenges
- Extraction of the execution component
- Docker

4 Result

5 Next steps

Presentation of PLM

Purposes

- Application to learn programming.

Presentation of PLM

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...

Presentation of PLM

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...
- ... while the teacher helps the ones having trouble.

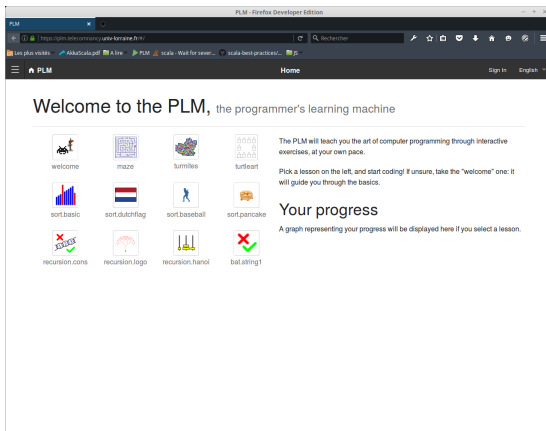

Presentation of PLM

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...
- ... while the teacher helps the ones having trouble.
- Used at TELECOM Nancy since 2008.

Presentation of PLM

Quick demo

- Available at <https://plm.telecomnancy.univ-lorraine.fr>

Presentation of PLM

12 lessons, 200 exercises

PLM - Mozilla Firefox

https://plm.univ-lorraine.fr/la/lessons/maze/maze-wallfollower/wallfollowerMaze

Les plus visités Linux Mint Community Forums Blog News NinjaMock - free tool... Spotify Web Player Wau The Most Amaz... Coursa P2P

PLM Maze / WallFollowerMaze Se connecter Java Français

World Objective

Résultats de l'exécution

Éditeur de code:

```
public void run() {  
    // ...  
}
```

Cas de tests:

Another labyrinth Labyrinth

Presentation of PLM

12 lessons, 200 exercises

PLM - Mozilla Firefox

PLM Recursion Logo / Tree Se connecter Java Français

World Objective

Éditeur de code: Réinitialiser API

```
public void tree(int steps, double length, double angle, double shrink) {  
    // ...  
}
```

Résultats de l'exécution

Cas de tests:

tree(10,100,90,0.68)	▶	tree(10,80,45,0.7)	▶
tree(7,75,15,0.8)	▶	tree(7,75,30,0.8)	▶

Presentation of PLM

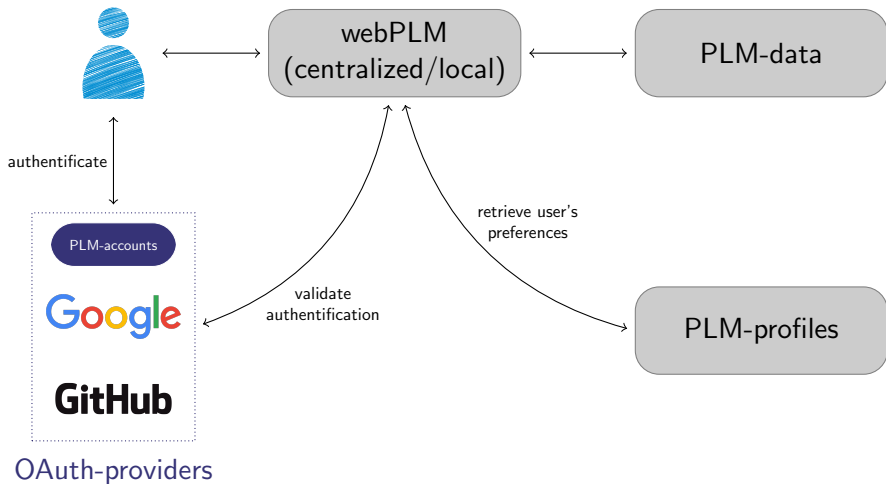

Languages and programming languages

- Available languages:
 - English
 - French
 - Brazilian Portuguese
- Supported programming languages:

Presentation of PLM

Application's architecture

Outline

1 Presentation of PLM

- Purposes
- Demo
- About PLM
- Architecture

2 To a web app

- Goals
- Server-side
- Client-side

3 Assessment of user's code

- Challenges
- Extraction of the execution component
- Docker

4 Result

5 Next steps

To a web app

Evolution of the project

- Formerly a fat client
 - Written in Java

To a web app

Evolution of the project

- Formerly a fat client
 - Written in Java
- Switch to a web application
 - Server implemented in Scala using *PlayFramework*
 - User interface written in Javascript using *AngularJS* and *Foundation*

To a web app

Motivations

- Want to switch to SaaS¹
 - Easy to use
 - Easy to update
 - Easy to track usage data
- More user-friendly
- Aim to setup SPOC² and MOOC³
- But don't have the time and means for a reboot

¹Software as a Service

²Small Private Online Course

³Massive Open Online Course

To a web app

Refactoring PLM

- Implemented a headless version of PLM: *PLM-engine*
 - Provide all PLM's content and methods
 - But without a user interface

To a web app

Implementing the server

- Designed an API over PLM-engine
- Only need to implement a controller
 - Verify calls received from the client
 - Query or command PLM-engine according to the call
 - Send back result or acknowledgement to the client

To a web app

Interactions between components

To a web app

Multi-user scenario

To a web app

Results

- Build quickly a web server from the fat client...
- ... but we also need a user interface

To a web app

To a web app

- Have to translate user's actions into API calls
- Have to re-implement PLM-engine's data models

Outline

1 Presentation of PLM

- Purposes
- Demo
- About PLM
- Architecture

2 To a web app

- Goals
- Server-side
- Client-side

3 Assessment of user's code

- Challenges
- Extraction of the execution component
- Docker

4 Result

5 Next steps

Assessment of user's code

Limits

- Run on the same machine, same JVM

Assessment of user's code

Limits

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops

Assessment of user's code

Limits

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Endless file creation

Assessment of user's code

Limits

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Endless file creation
- And from *System.exit(whatever)*?

Assessment of user's code

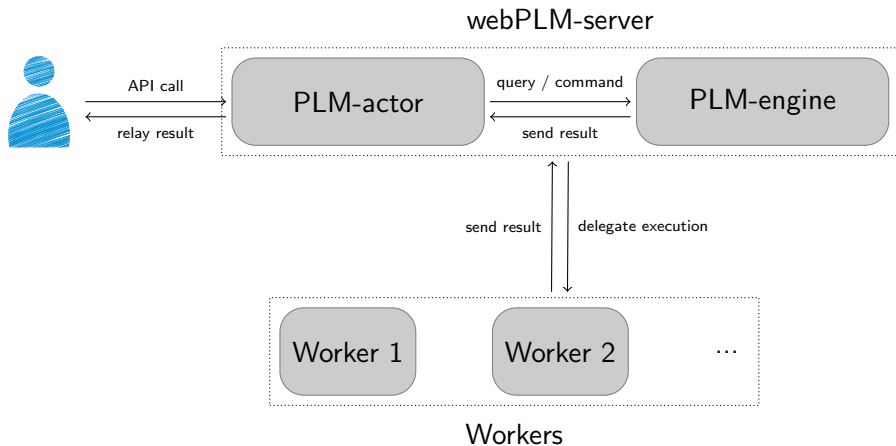

Limits

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Endless file creation
- And from *System.exit(whatever)*?
- Scalability issues

Assessment of user's code

Chosen solution

- Delegate execution to workers

Assessment of user's code

The judges

- Called *Judges* in the litterature
- Use PLM-engine as well
- Workflow:
 - Retrieve an execution request
 - Parse the request to extract parameters
 - Configure PLM-engine according to them
 - Run the user's code
 - Send back result to webPLM

Assessment of user's code

Message queues

- Message-driven architecture
- Loosely coupled system
- Asynchronous/Synchronous
- Help to implement:
 - Producer/Consumer pattern
 - Request/Response pattern
- Different reliability patterns of the message processing:
 - Only one worker
 - At least one worker
 - All workers
- Easy to scale

Assessment of user's code

Message queues

- Message-driven architecture
- Loosely coupled system
- **Asynchronous**/Synchronous
- Help to implement:
 - Producer/Consumer pattern
 - **Request/Response pattern**
- Different reliability patterns of the message processing:
 - **Only one worker**
 - At least one worker
 - All workers
- Easy to scale

Assessment of user's code

Architecture with judges

Assessment of user's code

Pros and cons

- Pros:
 - Allow to run code without impacting webPLM's performances
 - Meet the scalability requirements

Assessment of user's code

Pros and cons

- Pros:
 - Allow to run code without impacting webPLM's performances
 - Meet the scalability requirements
- Cons:
 - Make sure to use the right version of PLM-engine
 - Need to deploy them easily
 - Should restart them after each execution
 - Have to restrict their resources usage

Assessment of user's code

Docker

- Lightweight virtualization tool
- Build image of your application
- Run containers based on images

Assessment of user's code

Docker in our case

- Deploy easily all components
- Restart judges automatically
- Limit judges' ressources

Outline

1 Presentation of PLM

- Purposes
- Demo
- About PLM
- Architecture

2 To a web app

- Goals
- Server-side
- Client-side

3 Assessment of user's code

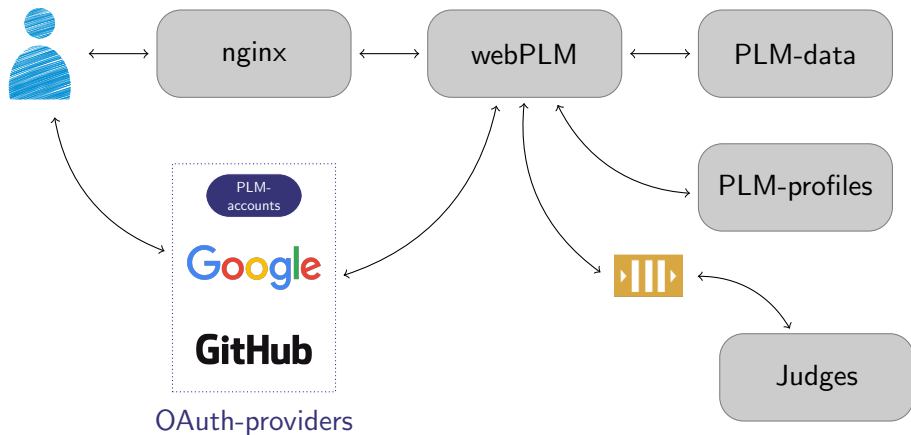

- Challenges
- Extraction of the execution component
- Docker

4 Result

5 Next steps

Result

Current architecture

Result

Live-session in TELECOM Nancy

- Rushed to release a stable version before the start of the school year
- Used in TELECOM Nancy in September 2015
- 30 hours of live testing with 100 students

Result

Live-session in TELECOM Nancy

- Rushed to release a stable version before the start of the school year
- Used in TELECOM Nancy in September 2015
- 30 hours of live testing with 100 students
- Engine is (almost) working fine...
- ... but user experience needs to be improved!

- Scalability issues:
 - Work well with small exercises
 - Can't cope with workload of larger exercises

Result

Live-session in TELECOM Nancy

- Scalability issues:
 - Work well with small exercises
 - Can't cope with workload of larger exercises
- No tools for monitoring set up...

Result

Live-session in TELECOM Nancy

- Scalability issues:
 - Work well with small exercises
 - Can't cope with workload of larger exercises
- No tools for monitoring set up...
- ... so the bottleneck is unknown.

Result

Refactor the code

- Needed to clean some parts of the code before further building
- Merged local and centralized mode branches

Outline

- 1 Presentation of PLM
 - Purposes
 - Demo
 - About PLM
 - Architecture
- 2 To a web app
 - Goals
 - Server-side
 - Client-side
- 3 Assessment of user's code
 - Challenges
 - Extraction of the execution component
 - Docker
- 4 Result
- 5 Next steps

Next steps

Extract components from PLM-engine

- Most components are inside PLM-engine
- Updating PLM-engine → new version of webPLM and Judge
- Heavy and error prone workflow

- Allow to implement an exercise editor

Next steps

Solve performance issues

- Set up some monitoring tools
- Perform some load testing to identify the bottleneck

Next steps

Sneak peek from the TODO list

- Integrate interns' contributions
- Set up Continuous Deployment
- Support additional programming languages
- Implement a debug mode similar to popular IDEs' ones
- Add features to help teachers to supervise their students
- ...

Thanks for your attention, any questions?
