ADT PLM

Programmer's Learning Machine

Matthieu Nicolas

IJD Seminar, 2016-02-02

Outline

- Presentation of PLM
 - Purposes
 - Demo
 - About PLM
 - Architecture
- 2 User's code's assessment
 - Challenges
 - Extraction of the execution component
 - Docker
- Result
- 4 Next steps

- 4 Next steps

Purposes

• Application to learn programming.

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...

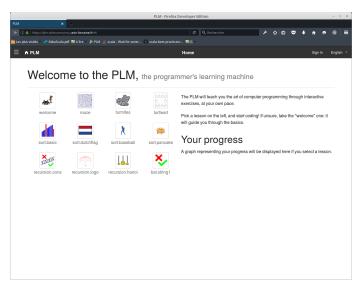

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...
- ... while the teacher helps the ones having trouble.

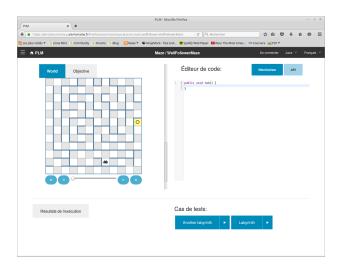

Purposes

- Application to learn programming.
- Allows students to progress at their own speed...
- ... while the teacher helps the ones having trouble.
- Used at TELECOM Nancy since 2008.

Quick demo

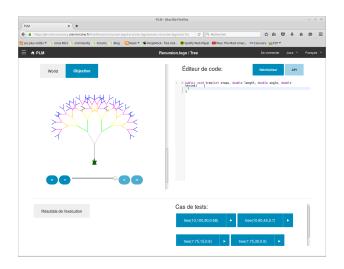

12 lessons, 200 exercises

12 lessons, 200 exercises

12 lessons, 200 exercises

Supported languages

- English
- French
- Brazilian Portuguese

Supported programming languages

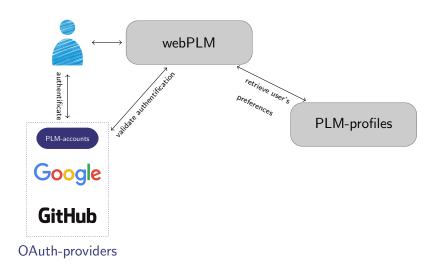

Evolution of the project

- Formerly a fat client
 - Written in Java

Evolution of the project

- Formerly a fat client
 - Written in Java
- Switch to a web application
 - Server implemented in Scala using PlayFramework
 - User interface written in Javascript using AngularJS and Foundation

Application's architecture

Execution components

Matthieu Nicolas ADT PLM IJD Seminar, 2016-02-02 12 / 28

• Run on the same machine, same JVM

13 / 28

Matthieu Nicolas ADT PLM IJD Seminar, 2016-02-02

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops

13 / 28

Matthieu Nicolas ADT PLM IJD Seminar, 2016-02-02

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Storage jamming with files

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Storage jamming with files
- And from System.exit(whatever)?

- Run on the same machine, same JVM
- How to protect ourselves from users' rookie mistakes?
 - Infinite loops
- And from more malicious "mistakes"?
 - Infinite thread creation
 - Storage jamming with files
- And from System.exit(whatever)?
- Scalability issues

Chosen solution

• Delegate the execution to workers

14 / 28

Matthieu Nicolas ADT PLM IJD Seminar, 2016-02-02

Chosen solution

- Delegate the execution to workers
- Let it crash strategy

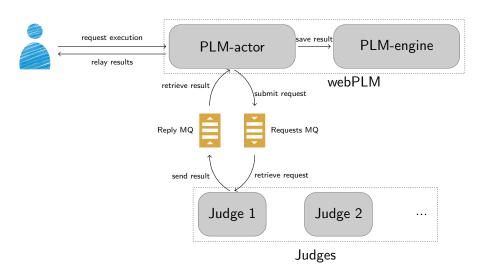

Chosen solution

- Delegate the execution to workers
- Let it crash strategy
- Pros:
 - Allow to run code without impacting webPLM's performances
 - Meet the scalability requirements

Chosen solution

- Delegate the execution to workers
- Let it crash strategy
- Pros:
 - Allow to run code without impacting webPLM's performances
 - Meet the scalability requirements
- Cons:
 - Need to deploy them easily
 - Should be able to reset them
 - Have to restrict their resources usage

Architecture with judges

- Build image of your application
- Run containers based on images
- Lightweight virtualization

Example of Dockerfile

Matthieu Nicolas ADT PLM IJD Seminar, 2016-02-02 17 / 28

Docker-compose

Matthieu Nicolas ADT PLM IJD Seminar, 2016-02-02 18 / 28

Docker in our case

- Deploy easily all components
- Restart judges automatically
- Hold out against users' mischiefs

19 / 28

Matthieu Nicolas ADT PLM IJD Seminar, 2016-02-02

Outline

Current architecture

Live-session in TELECOM Nancy

• 30 hours of live testing with 100 students.

Live-session in TELECOM Nancy

- 30 hours of live testing with 100 students.
- Engine is (almost) working fine...

Live-session in TELECOM Nancy

- 30 hours of live testing with 100 students.
- Engine is (almost) working fine...
- ... but user experience needs to be improved!

Live-session in TELECOM Nancy

• Can't cope with the workload.

Live-session in TELECOM Nancy

- Can't cope with the workload.
- No tools for monitoring set up...

Live-session in TELECOM Nancy

- Can't cope with the workload.
- No tools for monitoring set up...
- ... so the bottleneck is unknown.

Outline

- - Purposes
 - Demo
 - About PLM
 - Architecture
- - Challenges
 - Extraction of the execution component
 - Docker
- Next steps

Next steps

Refactor the code

- Rushed to release a stable version before September...
- Needed to refactor some parts of the code.
- Standardized behavior of local and server mode.

Next steps

Simplify workflow to adapt the content

- Store most content inside PLM.
- Heavy and error prone workflow.
- Need to extract the content from PLM's jar.
- Allow to implement an exercise editor.

Next steps

Solve performance issues

- Set up some monitoring tools.
- Perform some load testing to identify the bottleneck.

Questions

Thanks for your attention, any questions?
